--26. An image reproducing apparatus capable of displaying an image on a object, picked up by a camera and stored together with angle formation of the camera, on a display device, comprising:

reproducing means for reproducing a plurality of images picked up by the camera, on the display device; and reproducing control means for controlling reproduction by said reproducing means so as to display a group of images picked up by the camera whose direction is a predetermined direction, among the plurality of images stored in said storage means.

27. An apparatus according to claim 26, further comprising detecting means for detecting a direction of the camera and generating the direction information of the camera.

28. An apparatus according to claim 26, wherein the angle information of the camera, which is to be stored in said storage means together with the plurality of images, is information as to an angle where the camera is angled when the respective images to be stored in said storage means are picked up.

29. An image reproducing method of displaying an image of an object, picked up by a camera and stored together with angle information of the camera, on a display device, comprising the steps of:

reproducing a plurality of images picked up by the camera in storage means, on the display device; and

controlling reproduction so as to display a group of images picked up by the camera whose direction is a predetermined direction, among the plurality of images stored in the storage means.

30. A method according to claim 29, further comprising a detecting step of detecting a direction of the camera and generating the direction information of the camera.

31. A method according to claim 29, wherein the angle information of the camera, which is to be stored in the storage means together with the plurality of images, is information as to an angle where the camera is angled when the respective images to be stored in the storage means are picked up. --
